PROFESSIONAL SUMMARY

Full-Stack Web Developer and IT graduate passionate about building intuitive digital tools that solve real-world problems and simplify operations. Experienced in engineering full-stack platforms using Python (Django, Flask, FastAPI) and JavaScript, alongside crafting cross-platform mobile experiences in React Native. Expert in integrating specialized hardware and offline AI capabilities to build resilient, zero-configuration solutions. A collaborative leader and trainer dedicated to managing projects from concept to launch, ensuring clean code, operational accountability, and exceptional user experiences.

TECHNICAL SKILLS

- **Languages:** Python, JavaScript, Java, HTML, CSS
- **Web & Mobile Frameworks:** Django, Flask, FastAPI, React.js, React Native, Bootstrap CSS, Tkinter, Flet
- **Databases & Cloud:** PostgreSQL, MySQL, SQLite, Firebase, Supabase, PythonAnywhere, Vercel
- **Tools & API Integrations:** Git, Mapbox, OpenCV, Canva
- **Hardware & IoT:** Raspberry Pi, Arduino, ESP32, NodeMCU

EXPERIENCE

The Potter's House by Chinyu | Butuan City, Philippines

IT Intern | Full-Stack Web Developer

- Developed a comprehensive web-based inventory management system to track products, streamlining daily stock operations and significantly reducing manual bottlenecks.
- Implemented digital Purchase Order (PO) and Purchase Request (PR) workflows, greatly improving procurement efficiency and speed.
- Built dynamic web data visualization dashboards to show transaction trends and distribution, aiding management in critical business decision-making.
- Created robust activity logging features to monitor inventory movements and ensure operational accountability.
- Collaborated directly with staff to understand workflows and deliver a centralized web platform that minimizes manual errors.

PyBalanghay Organization | Butuan City, Philippines

Trainer

- Conducted hands-on technical workshops for college peers, breaking down complex programming concepts into practical, easy-to-understand lessons.
- Spearheaded community outreach programs, introducing local high school students to foundational coding skills through interactive training sessions.
- Mentored students during live coding activities, providing real-time troubleshooting and fostering a highly collaborative learning environment.

WEB & TECHNICAL PROJECTS

SafeBite: AR-Powered Navigation & Dining App

Built with React Native, Python (FastAPI), Unity, Firebase, Mapbox

- Designed a mobile application and backend web administrative platform utilizing Mapbox to provide pedestrians and vehicle users with crime-avoidant routes in Butuan City.
- Integrated augmented reality (AR) navigation for real-time, turn-by-turn directions to ensure user safety.

The Potter's House by Chinyu: Inventory and Procurement System

Built with Python (Django), MySQL, HTML/CSS, Bootstrap CSS, JavaScript (Chart.js)

- Engineered a comprehensive web-based administrative platform providing staff with robust tools to track stock levels and calculate complex product costs.
- Digitized the management of purchase requests and orders, integrating dynamic data visualization for real-time monitoring of transaction trends.

STEPHEN CEASAR A. NAVARRA

LoKal: An Offline Educational AI Learning Assistant

Built with Python (Django), JavaScript, HTML/CSS, SQLite, Ollama, Vosk, Raspberry Pi 4B

- Developed a production-ready offline web educational platform integrating local AI models to ensure accessible, internet-free learning for students.
- Implemented voice recognition for a conversational assistant and automated Wi-Fi hotspot deployment for zero-configuration device connections.

KickX: A Comprehensive E-commerce and Sneaker Retail Platform

Built with Python (Flask), SQLite, HTML/CSS, Bootstrap 5, JavaScript (PayPal SDK), Data Analysis (Pandas/NumPy)

- Designed a full-stack web-based e-commerce platform allowing users to browse product catalogs, manage shopping carts, and process secure payments.
- Developed a dynamic, data-driven recommendation engine using Pandas and NumPy to personalize product discovery and track trending items in real-time.

Garbage Bot Picker: Gesture-Controlled Robotic Vehicle

Built with Python (Flask, OpenCV), NodeMCU, MPU6050, Raspberry Pi (GPIO), ESP32-CAM, TCP/IP Sockets

- Programmed a gesture-controlled robotic vehicle featuring a mechanized arm and an intuitive control system translating hand orientation into movement.
- Implemented real-time video streaming via ESP32-CAM and OpenCV using TCP/IP Sockets

PHQuest: A Philippine Discovery Quiz Game

Built with React Native, Python (FastAPI), SQLite

- Created an interactive mobile application and backend server with dynamic game mechanics focusing on the Geography, History, and Culture of the Philippines.
- Engineered a real-time global leaderboard, life systems, and detailed user performance tracking.

VOLUNTEER WORK & ACHIEVEMENTS

- **Trainer**, Community Extension Service (Libertad & Taligaman National High Schools) | PyBalanghay Organization | Feb - Mar 2025
- **Trainer & Associate Trainer**, Basic Python & Web Development Workshops | PyBalanghay Organization | Nov 2024
- **Participant**, HACKFORGOV Capture-the-flag Competition | DICT Caraga | Aug 2024
- **Facilitator**, "Empowering Students Through Digital Knowledge" | ACLC Community Extension Service | May 2024
- **Participant**, Programming Contest & Delegate | PSITE ICT Student Congress | May 2024

WORKSHOPS AND SEMINARS

- **Productivity Tools Training and Workshop on Python Programming Language and Adobe Photoshop** | November 2022
- **Empowering Students through Digital Knowledge - ACLC Community Service** | May 2024

EDUCATION

ACLC College Of Butuan
Bachelor of Science in Information Technology

Butuan, Philippines
2022 - 2026
